Windows Server 2012 R2

Active Directory
Disaster Recovery

Active Directory Disaster Recovery

This workshop is designed to give you an overview of possible disasters and best practices on the recovery scenarios. Because disaster recovery best practice is all about time and documentation, Workshop-labs are designed to work mainly on the Command Line interface or PowerShell (possibility to prepare scripts and automation). This workshop addresses Active Directory Domain Services recovery but not dependent services. Depending services, such as DNS, are part of this Workshop.

Innsbruck, 19. bis 21. Jänner 2016 / € 3.021,- excl. USt.

PowerShell 4.0

PowerShell for the
IT Administration
Part 1

PowerShell for the IT Administration Part 1

This WorkshopPLUS course introduces PowerShell essential concepts and provides participants with the knowledge and skills required to use PowerShell cmdlets and scripting to simplify administration of their environments. This course is the first of a two-part series that covers PowerShell basics, scripting, and more advanced topics. It is highly recommended that participants complete Part 1 before starting the Part 2 course.

Innsbruck, 16. bis 19. November 2015 / € 3.021,- excl. USt.

PowerShell for the
IT Administration
Part 2

PowerShell for the IT Administration Part 2

This workshop builds on the concepts presented in PowerShell for the IT Administrator, Part 1. Participants in the Part 2 course should have already completed the Part 1 course. This course covers advanced PowerShell concepts such as type adaptation, working with external code libraries, error handling and debugging. Participants are provided with the knowledge and skills required to use PowerShell to simplify administration of their environments.
