Seminarinhalte

Data protection strategies

Review of key data protection strategies that ensure the safety of your data.

Analysis of risks to data

Explore different risk scenarios, what risks do we face daily within our environment?

What is protected?

Review of Veeam Data Platform and introduction to the class scenario.

Security and protection considerations

Describe strategies and tools to secure the Veeam backup server to avoid unauthorized access and data leaks.

Protecting workloads

Efficiently protect VMware and Hyper-V virtual machines based on well-defined SLAs through the creation of backup jobs.

Deploying agents

Identify the use of protection groups to automate the installation of Veeam Agents and protecting workloads with agent backup jobs.

Unstructured data backup

List required components and features available to protect unstructured data.

Optimizing your backups

Analyze features and settings that allow backup storage optimization, faster backups and data consistency.

Immutability and hardened repositories

Describe backup data protection mechanisms to avoid premature deletion and unwanted modifications. Identify characteristics and deployment steps of Linux Hardened Repositories to achieve backup data immutability.

Backup infrastructure optimization

List deployment options and additional settings to improve general backup solution performance.

Replication

Describe use cases, architectures and features of replication jobs and continuous data protection (CDP) policies.

Backup copy jobs

Ensure recoverability and adhere to the 3-2-1 Rule with backup copy jobs.

Long-term retention

List different mechanisms for data archiving, including grandfather-father-son retention policies.

Scale-out Backup Repository™

Describe architecture, placement policies, data tiers and management of Scale-out Backup Repositories.

Voraussetzungen

Solide Kenntnisse von Servern, Speicher, Netzwerken und Virtualisierung.
